

X-BC 3 Buscontroller

Summary

This head-end bus controller is used for central adjustment of all bus-capable head-end devices via PC or laptop. At the same time it can also be used for maintenance or reprogramming of set-up head-end units via modem.

The device can only be operated by means of the HE programming software!

Features:

- Actuation of up to 240 bus-capable head-end units
- Operating software can be updated via the serial interface (meaning that no installation/removal work is required for software upgrades)
- Bell signal up to call acceptance can be individually adjusted (meaning that no installation/removal work is required for software upgrades)
- 8-digit identification code protects against unauthorized remote access
- Control of cross-module allocation of time-sharing
- Automatic fault notification via GMS
- Internal monitoring timer protects against expensive telephone costs (automatic disconnection after 5 minutes if communications are inactive)
